### Cleaning and maintenance

#### CLEANING

##### 01. WHAT IS THE BEST WAY TO CLEAN A BATH MADE OF KALDEWEI STEEL ENAMEL?

(See also “How do I clean my bath made of KALDEWEI steel enamel with the easy-clean finish?”)

Steel enamelled baths are very easy to clean, with little effort required.

- After use, rinse the enamel surface with water and wipe with a soft, damp cloth, chamois or sponge.
- Dry dark coloured products after use to prevent calcium build-up.
- Remove small stains with a regular household detergent or a mild all-purpose or bathroom cleaner; soak heavier stains before cleaning. Always follow the instructions on the cleaning product.
- To avoid calcium deposits, ensure that all fittings are properly sealed and that all water is removed after use. Any deposits that do occur despite these efforts can be removed with a lukewarm 1:1 mixture of water and vinegar (do NOT use concentrated vinegar). After cleaning, rinse the surface thoroughly.
- Personal hygiene products containing naturally occurring oils or fats, such as hair conditioners, shower and bath oils, may leave residue on the enamel surface that will increase the risk of slipping. Use a fat-removing alkaline cleaner to remove these stains and follow up with an acidic cleaner before rinsing the surface with clean water.
- Always observe the care instructions for the fittings on your product.
- Do not use coarse, abrasive cleaning products, strong acidic or alkaline cleaners (e.g. concentrated vinegar, chlorinated alkaline cleaners), steel wool, scouring pads, laundry detergents and wash-ing powder or laundry detergent/washing powder suds.
