Instructions for use and maintenance of products made of compact materials

Use of compact materials :

- worktops for kitchen worktops, bathroom worktops, sales counters, bank counters, reception desks, laboratories, etc.
- fittings - sinks, washbasins, bathtubs in medical facilities, bathtubs and shower enclosures
- interior elements - lamps, containers, coasters, flower pots, etc.

Functional properties:

- non-porosity and non-absorbency, health safety
- resistance to bacteria, fungi and microorganisms, stains and chemicals
- color fastness, seamless processing technology
- non-flammability
- fitness for contact with food

Maintenance :

Solid surface surfaces require specific maintenance:

After installing the worktop, you will feel that the worktop is soft and easy to scratch - everything will be visible on a glossy surface. This phenomenon will disappear after some time of use, because the board will have a silkier appearance, where the so-called patina will form on the surface of the board.

- Mainly due to the non-porosity and non-absorbency of the material, soapy water or water with spring will suffice for routine maintenance. Wipe the surface with a micro-cloth or dishwashing sponge soaked in soapy or spring water - you will get rid of common grease and stains. In use, most "abrasions" are polished. Always clean in a circular motion on the surface of the board

- The hob is designed for normal kitchen operation - ie. dining, food preparation, storage of kitchen utensils. The board must not be loaded by anyone sitting or walking on it.

- In the event of major damage caused by improper handling, the site can be repaired locally by repair, regrinding and polishing. Due to the seamless connection, such a correction is not recognizable. In this case, contact your supplier or directly to the address MosaicSolid s.r.o., u Borku 355, Pardubice 530 03, tel. 731126150 email: obchod@mosaicsolid.cz

- Do not expose compact material to strong chemicals or concentrated Sava. If your work surface or fitting comes into contact with substances such as a rust remover, oven cleaner, acetone, etc., rinse the surface quickly with soapy or spring water. If the surface of the hob changes color, polish the area with a soft side of a dishwashing sponge and CIF. You can also treat the stains with Pronto wood (honey).

- To increase the gloss on the work surface, use a clean micro-cloth with Pronto wood (honey) cleaning agents.

- Always use a heat-resistant pad under hot containers and electrical appliances.

- Occasionally clean sinks or washbasins with a solution of vinegar in a ratio of 1 l of water to ¼ l of vinegar. Fill the fitting with ½ water and add the recommended amount of vinegar, leave for 15 minutes and then wash the walls and bottom. Always wipe the fitting dry.

- Extremely recommended Savo can be used for the white decor of the sink. Use only concentrated water where you get the look as if the sink is new. DO NOT USE ON DECORS OTHER THAN A CLEAN WHITE DECOR.

- If you pour boiling water into the sink, then we recommend letting cold water into the sink at the same time.

- With proper care and recommended maintenance that is no different from other materials, you will enjoy your worktop every day for many years.

IT IS IMPORTANT TO HIGHLIGHT THE FACT THAT SOLIDSURFACE MATERIALS ARE NEW AS THE MADE BY THE PROFESSIONAL COMPANY AFTER MANY YEARS OF USE, AND IT IS NOT NECESSARY TO INVEST IN A NEW REALIZATION OF SOLIDSURFACE WORKTOPS AND PRODUCTS.
